

Brief Introduction.

CL100 is used to convert the 3-24V positive digital input to negative input.

Interface

Input Terminal:

Color	Description
RED	Input Level (0~2V 3~24V)
Black	GND

Output Terminal:

Color	Description
White	Output Level (Open GND)
Black	GND

For example:

If input terminal connected from 3 to 24V voltage, the output level line will output negative.

If input terminal connected from 0 to 2V voltage, the output level line will be open.

Dimensions.
